

# How to use this Wiki

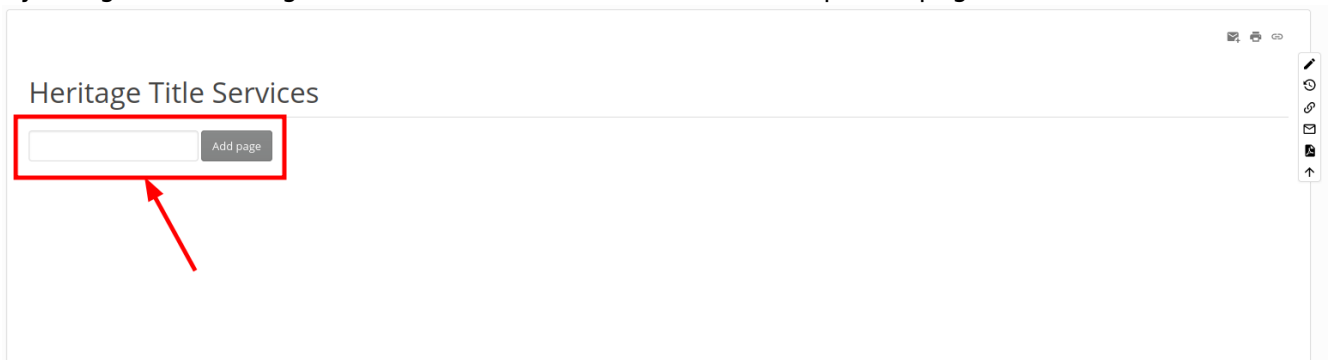

This page aims to provide a brief overview of how to create pages and populate them with content.

## Creating pages

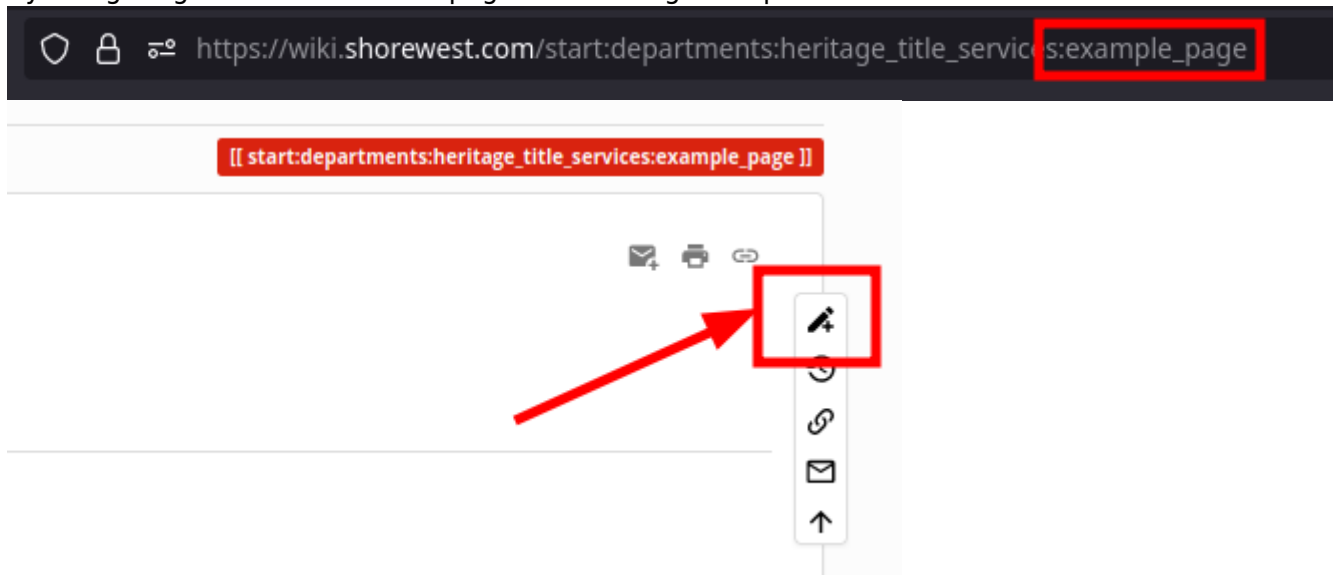

To create a page, you must first have permissions to do so within the namespace that you have chosen.

There are two ways to create a new page in a space:

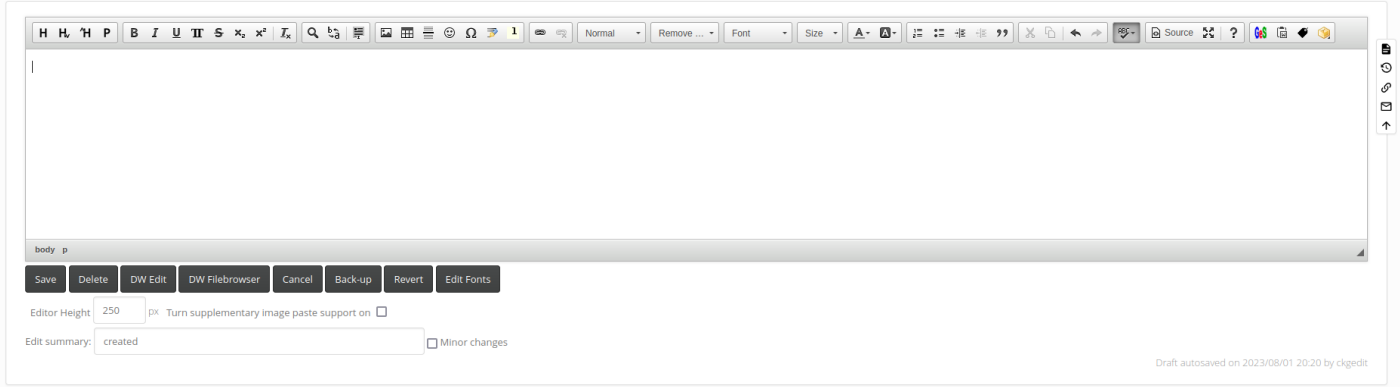

1. By using the “Add Page” box if one is available in the desired parent page:

2. By navigating to the nonexistant page and clicking the +pencil icon

Once you have created the page you will be brought to the editor window:

If you save at this point, you will see that your page now has an entry in its parent page that corresponds with the header title:
