

# How to use this Wiki

This page aims to provide a brief overview of how to create pages and populate them with content.

## Creating pages

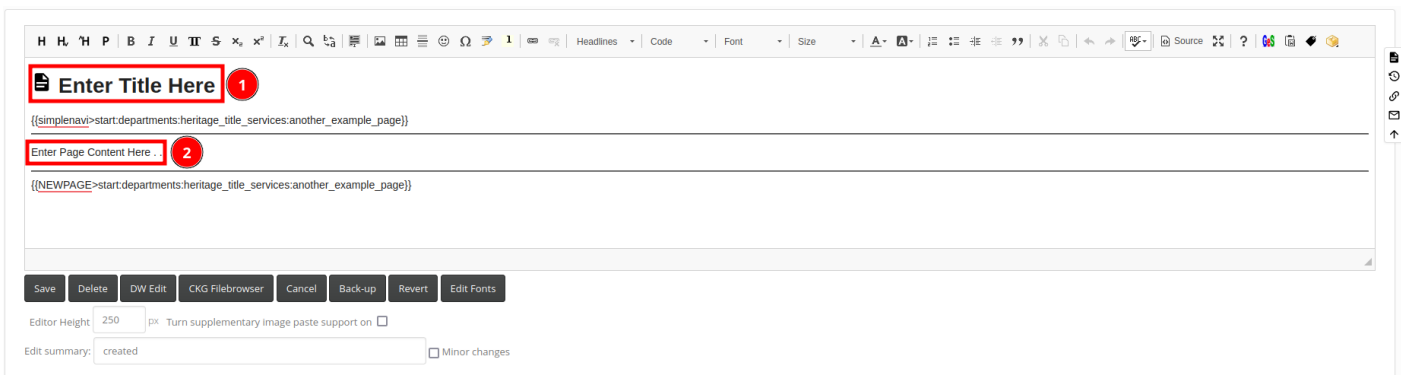

You can only create pages in places where you have permission to do so; if you have permission to create pages in a given name-space you will see the “Add page” box at the bottom of the page:

## Quick Page Creation

To create a child page of another page enter the desired name of the page in the “Add page” box and click “Add page” or hit enter.

You will be presented with the page editor on the new page. Here you must edit the title of the page (1); this is what will appear in the page menu of the parent page. Then you must add your content (2).

Page content should be placed in-between the two horizontal lines to preserve proper page formatting, this area will accept any standard text useable by the editor including headers, subheaders, tables, block quotes, and lists.
